

Ursa CloudVault

Getting Started Guide

1. Create Your Account

Sign Up

Visit app.ursacloudvault.com and click "Get Started" to create your account. You can sign up with your email address or use Google/Microsoft SSO. All new accounts begin with a 14-day free trial of the Professional plan — no credit card required.

Complete Your Profile

After signing up, verify your email address by clicking the confirmation link. Then complete your profile by entering your name and organization. If you received an invitation from a team member, clicking the invite link will automatically associate you with their organization.

2. Install the Desktop App

Download and Install

Download the CloudVault desktop application from app.ursacloudvault.com/download. The app is available for Windows 10 and later, macOS 12 and later, and Ubuntu 22.04 and later. Installation takes about two minutes.

Sync Folder Locations

After installation, sign in with your account credentials. The app will create a sync folder on your computer at the following default locations:

- Windows: C:\Users\<your-name>\CloudVault
- macOS: ~/CloudVault
- Linux: ~/CloudVault

Any file you place in this folder will automatically sync to the cloud. Files added from other devices or the web interface will appear here as well.

System Requirements

Component	Minimum	Recommended
Operating System	Windows 10 / macOS 12	Windows 11 / macOS 14
RAM	4 GB	8 GB
Disk Space	500 MB	1 GB
Internet	5 Mbps	25 Mbps

3. Upload Your First Files

Upload Methods

You can add files to CloudVault in three ways:

- Drag and drop: Move files into your CloudVault sync folder or drag them into the web interface.
- File browser: Click "Upload" in the web interface to select files from your computer.
- Mobile app: Use the iOS or Android app to upload photos, videos, and documents directly from your device.

Supported Formats

CloudVault supports all file types. There are no format restrictions. Upload speeds depend on your internet connection — the app shows progress for each file in the sync status panel.

4. Organize with Folders

Create folders to organize your files. Right-click in the sync folder or web interface and select "New Folder." Folders sync across all your devices automatically.

Naming Conventions

Tip: Use a consistent naming convention for your folders. We recommend organizing by project or department rather than by date. For example: "Marketing/Campaign-Q1-2026" is easier to navigate than "2026/01/Marketing".

5. Share Files and Collaborate

Share Links

Right-click any file or folder and select "Share" to generate a share link. You can set permissions to view-only or edit access, add password protection, set expiration dates, or restrict sharing to your organization.

Team Folders

On Professional and Enterprise plans, you can create Team Folders — shared spaces where multiple team members collaborate. Team folders appear under a dedicated "Teams" section in your sync folder. Changes made by any team member sync in real time.

6. Enable Security Features

Two-Factor Authentication

We strongly recommend enabling two-factor authentication (2FA) immediately after creating your account. Go to Account Settings, then Security, and click "Enable Two-Factor Authentication." CloudVault supports authenticator apps (Google Authenticator, Authy), SMS codes, and hardware security keys.

Single Sign-On

Enterprise administrators should also configure SSO via SAML 2.0 or OIDC from the Admin Console. This ensures all team members authenticate through your organization's identity provider.

7. Set Up Mobile Backup

Camera Backup

Install the CloudVault mobile app from the App Store (iOS) or Google Play (Android). Sign in and enable automatic photo and video backup under Settings, then Camera Backup. New photos and videos will upload automatically when you are connected to Wi-Fi.

Document Scanning

You can also enable document scanning — open the app, tap the camera icon, and scan receipts, whiteboards, or paper documents. Scanned files are saved as searchable PDFs with OCR.

8. Next Steps

Once you are set up, explore these additional features:

- **Version History:** Browse and restore previous versions of any file from the web interface.
- **Offline Access:** Mark files or folders as "Available Offline" to access them without an internet connection.
- **Integrations:** Connect CloudVault to Slack, Google Workspace, or Microsoft 365 from the Integrations page.
- **Admin Console:** Organization admins can manage users, view analytics, and enforce policies.
